《 Round 7 》

- Git 개요 《
- GitHub
- Git 실습

파뿌리
파이썬 뿌시는 이십대들!!

Git?

- 분산형 버전 관리 시스템
- 소스 코드 관리에 주로 사용

파뿌리
파이썬 뿌시는 이십대들!!

Why use it?

- 여러 사림이 동일한 코드에 대해 동시에 작업을 할 때
- 상대방의 작업을 방해하지 않으면서
- 변경 이력을 남기면서
- 효율적으로

프로그래밍이 가능해진다.

Install git

Git 2.19.0 Setup
Adjusting your PATH environment
How would you like to use Git from the command line?
Use Git from Git Bash only
This is the safest choice as your PATH will not be modified at all. You will only b
able to use the Git command line tools from Git Bash.
Use Git from the Windows Command Prompt
This option is considered safe as it only adds some minimal Git wrappers to you
PATH to avoid cluttering your environment with optional Unix tools. You will be
able to use Git from both Git Bash and the Windows Command Prompt.
Use Git and optional Unix tools from the Windows Command Prompt
Both Git and the optional Unix tools will be added to your PATH.
Warning: This will override Windows tools like "find" and "sort". Only
use this option if you understand the implications.
https://gitforwindows.org/

Git 2.19.0 Setup
Choosing HTTPS transport backend
Which SSL/TLS library would you like Git to use for HTTPS connections?
Use the OpenSSL library
Server certificates will be validated using the ca-bundle.crt file.
Use the native Windows Secure Channel library
Server certificates will be validated using Windows Certificate Stores.
This option also allows you to use your company's internal Root CA certificates
distributed e.g. via Active Directory Domain Services.
https://gitforwindows.org/

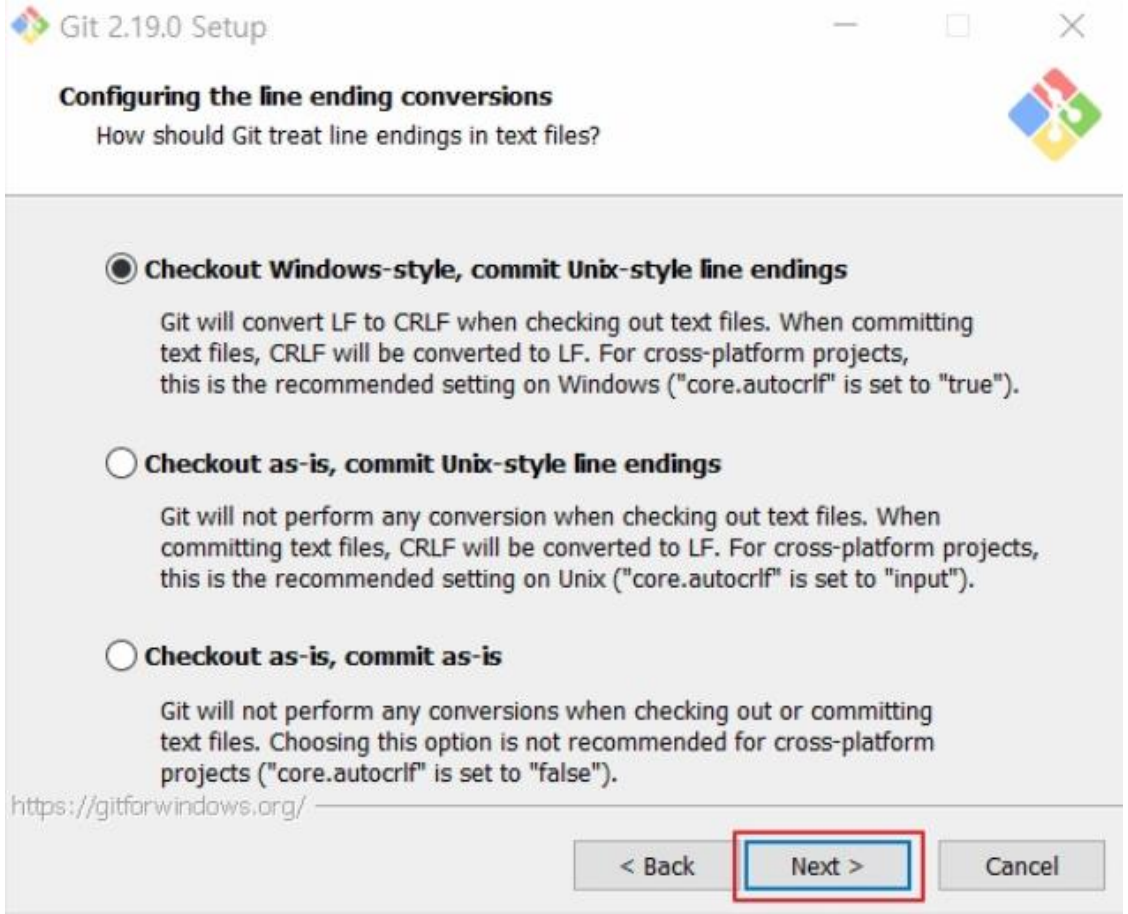
Install git



Git 2.19.0 Setup
Configuring the line ending conversions
How should Git treat line endings in text files?
Checkout Windows-style, commit Unix-style line endings
Git will convert LF to CRLF when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Windows ("core.autocrlf" is set to "true").
Checkout as-is, commit Unix-style line endings
Git will not perform any conversion when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Unix ("core.autocrlf" is set to "input").
Checkout as-is, commit as-is
Git will not perform any conversions when checking out or committing text files. Choosing this option is not recommended for cross-platform projects ("core.autocrlf" is set to "false").
https://gitforwindows.org/

Git 2.19.0 Setup
Configuring the terminal emulator to use with Git Bash
Which terminal emulator do you want to use with your Git Bash?
Use MinTTY (the default terminal of MSYS2)
Git Bash will use MinTTY as terminal emulator, which sports a resizable window non-rectangular selections and a Unicode font. Windows console programs (suc as interactive Python) must be launched via `winpty` to work in MinTTY.
Use Windows' default console window
Git will use the default console window of Windows ("cmd.exe"), which works v with Win32 console programs such as interactive Python or node.js, but has a very limited default scroll-back, needs to be configured to use a Unicode font in order to display non-ASCII characters correctly, and prior to Windows 10 its window was not freely resizable and it only allowed rectangular text selections.

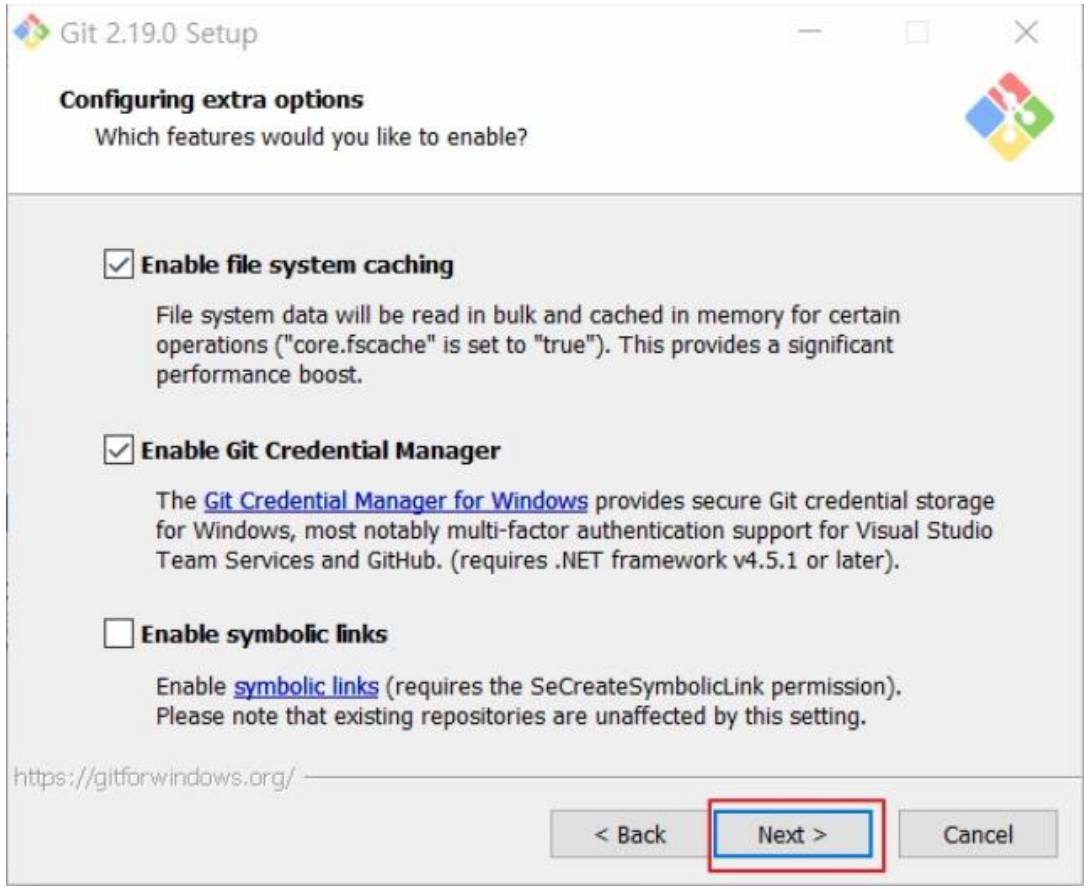
Install git



Git 2.19.0 Setup
Configuring extra options
Which features would you like to enable?
Enable file system caching
File system data will be read in bulk and cached in memory for certain operations ("core.fscache" is set to "true"). This provides a significant performance boost.
Enable Git Credential Manager
The Git Credential Manager for Windows provides secure Git credential storage for Windows, most notably multi-factor authentication support for Visual Studio Team Services and GitHub. (requires .NET framework v4.5.1 or later).
Enable symbolic links
Enable symbolic links (requires the SeCreateSymbolicLink permission). Please note that existing repositories are unaffected by this setting.
https://gitforwindows.org/

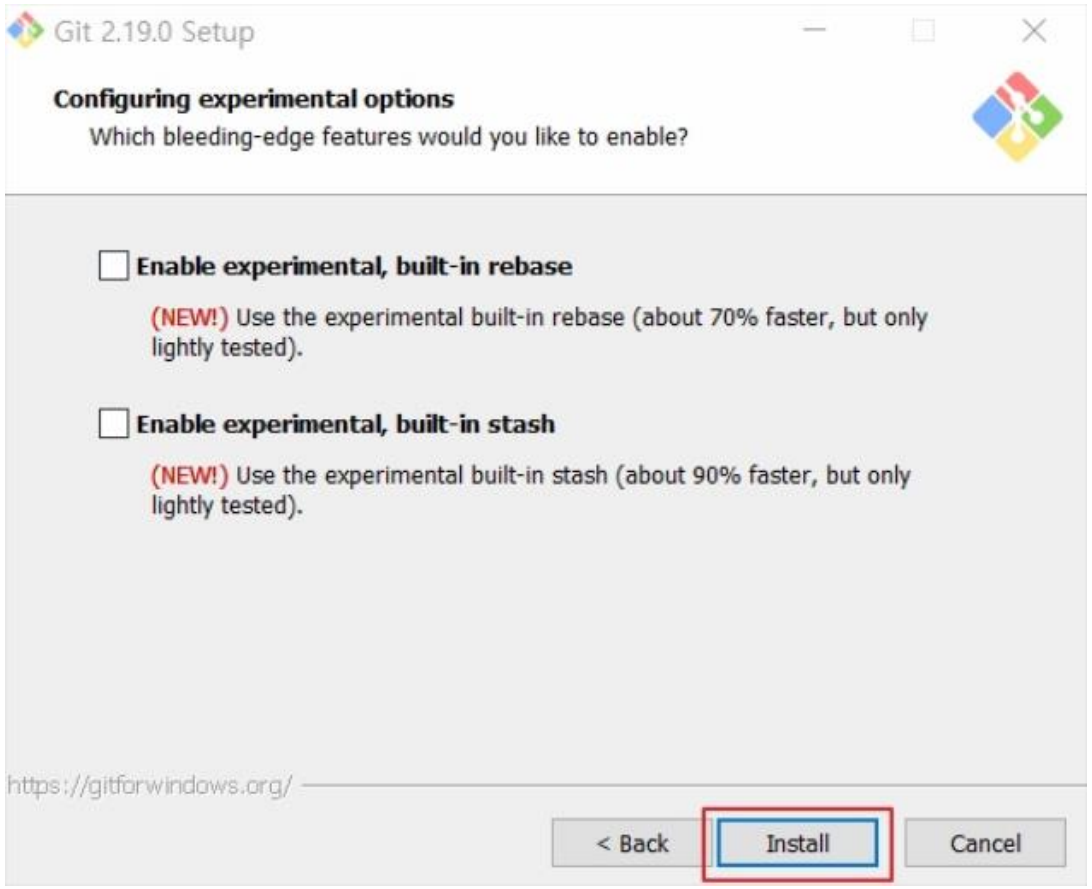
Cancel



Git 2.19.0 Setup
Configuring experimental options
Which bleeding-edge features would you like to enable?
Enable experimental, built-in rebase
(NEW!) Use the experimental built-in rebase (about 70% faster, but only lightly tested).
Enable experimental, built-in stash
(NEW!) Use the experimental built-in stash (about 90% faster, but only lightly tested).

《 Round 7 》

- Git 개요 - complete
- GitHub - complete
- Git 실습 《

Git keyword

- git init
: git repository 생성

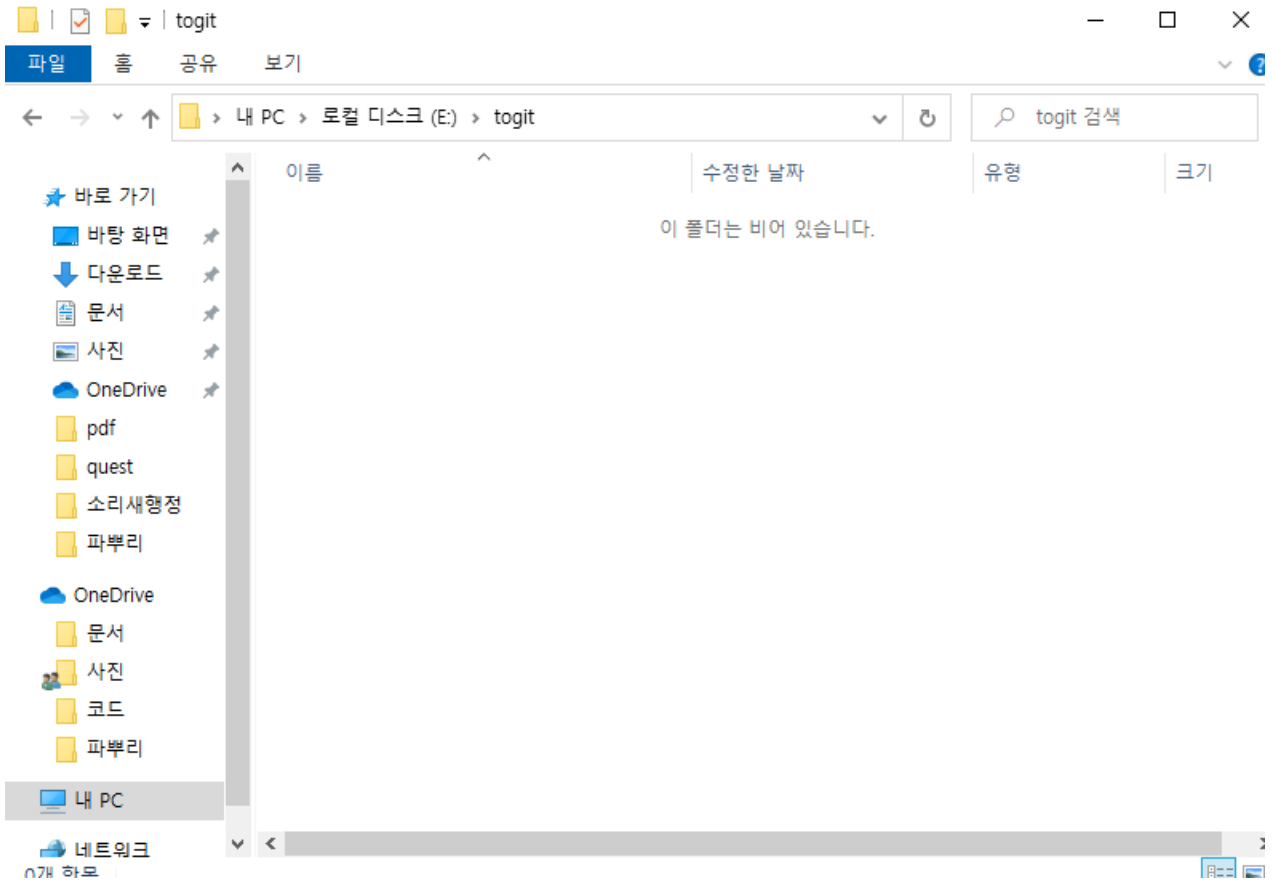
- git add "file name"
: 해당 파일 stage

- git commit -m "comment"
: staged 파일들 commit(repository에 반영)

- git pull "remote repository address"
: 해당 remote repositor를 받아와서 내 local repository에 합병하기

- git push origin master
: local repository를 remote repository로 밀어넣기

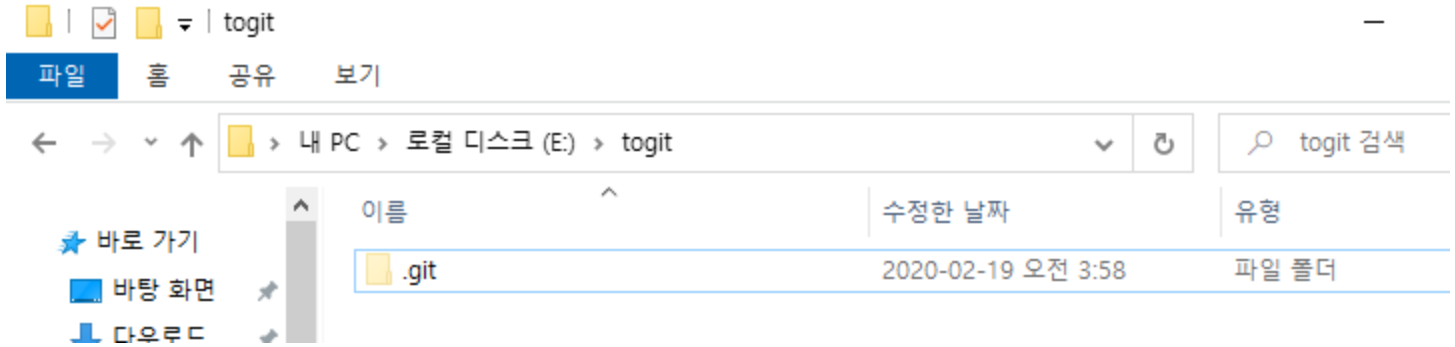
Git training



make a directory (anywhere)

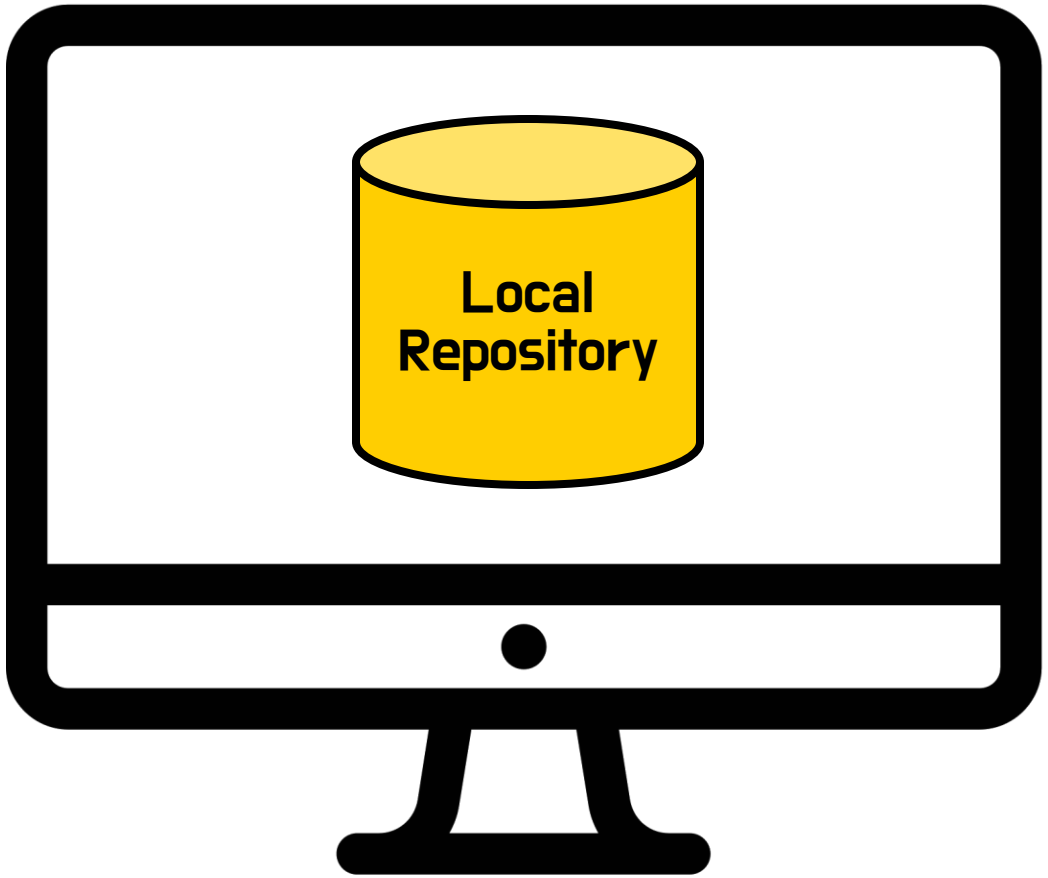
Git training

Go to directory & "git init"



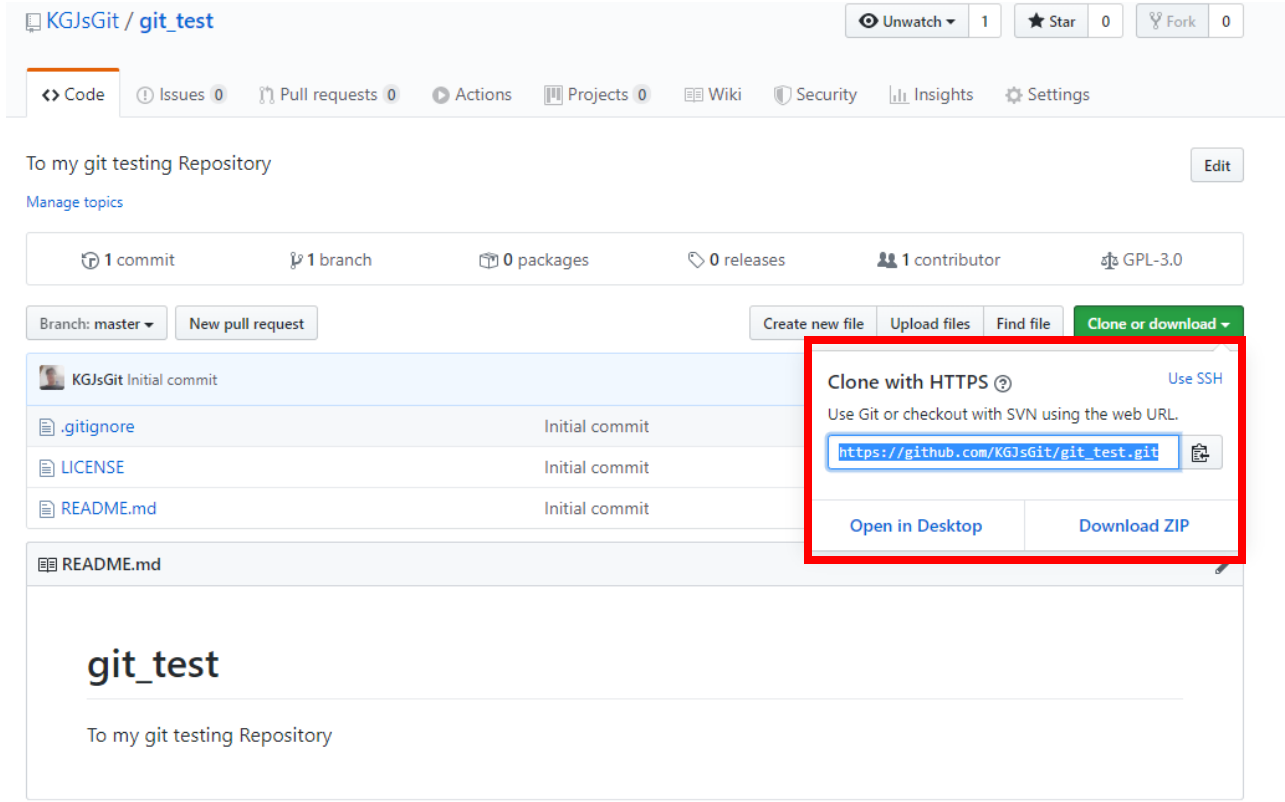
Check your local repository

Git training



"git init"

Git training



Copy the remote repository URL

Git training

```
E:₩togit>git pull https://github.com/KGJsGit/git_test.git
remote: Enumerating objects: 5, done.
remote: Counting objects: 100% (5/5), done.
remote: Compressing objects: 100% (4/4), done.
remote: Total 5 (delta 0), reused 0 (delta 0), pack-reused 0
Unpacking objects: 100% (5/5), 13.45 KiB | 57.00 KiB/s, done.
From https://github.com/KGJsGit/git_test
 * branch            HEAD       -> FETCH_HEAD

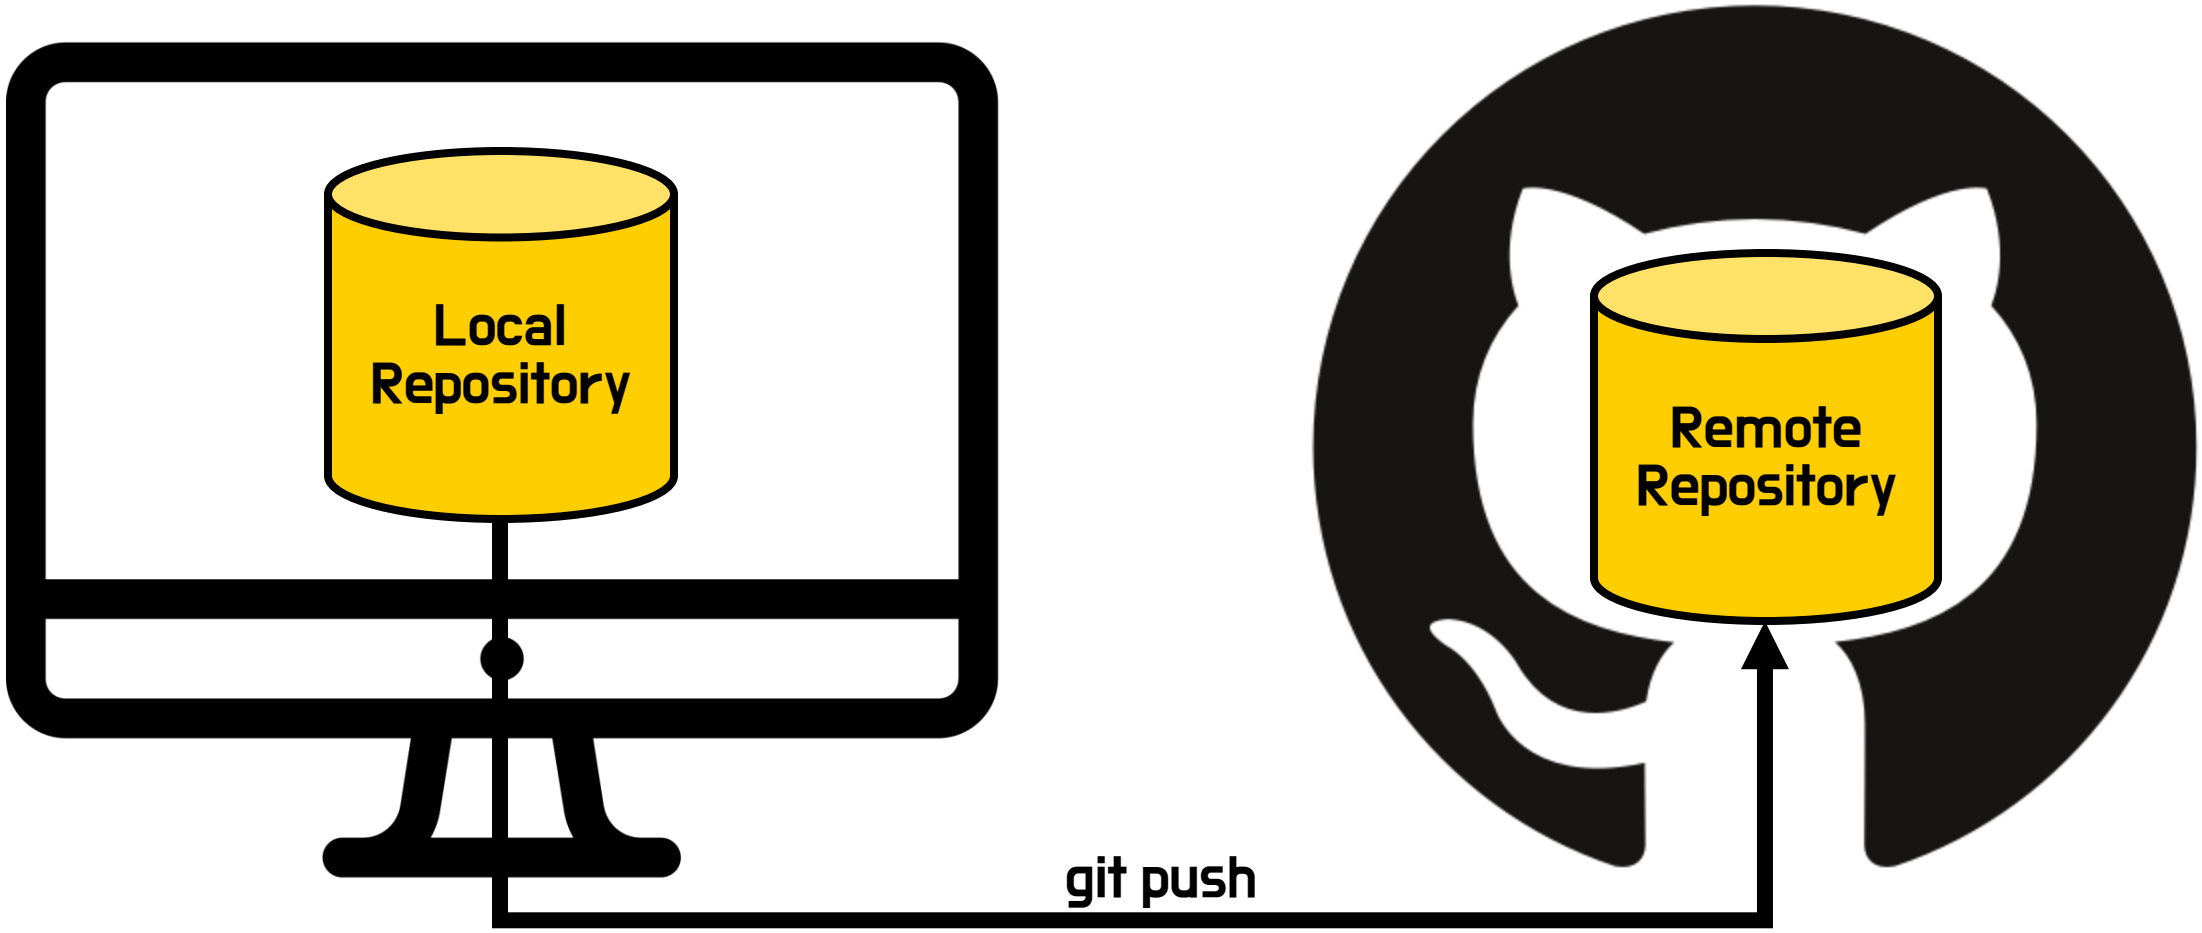
Writing objects: 100% (4/4), 1.31 KiB | 1.31 MiB/s, done.
Total 4 (delta 0), reused 0 (delta 0)
To https://github.com/KGJsGit/git_test.git
   fe97191..9c4acc0  master -> master
```

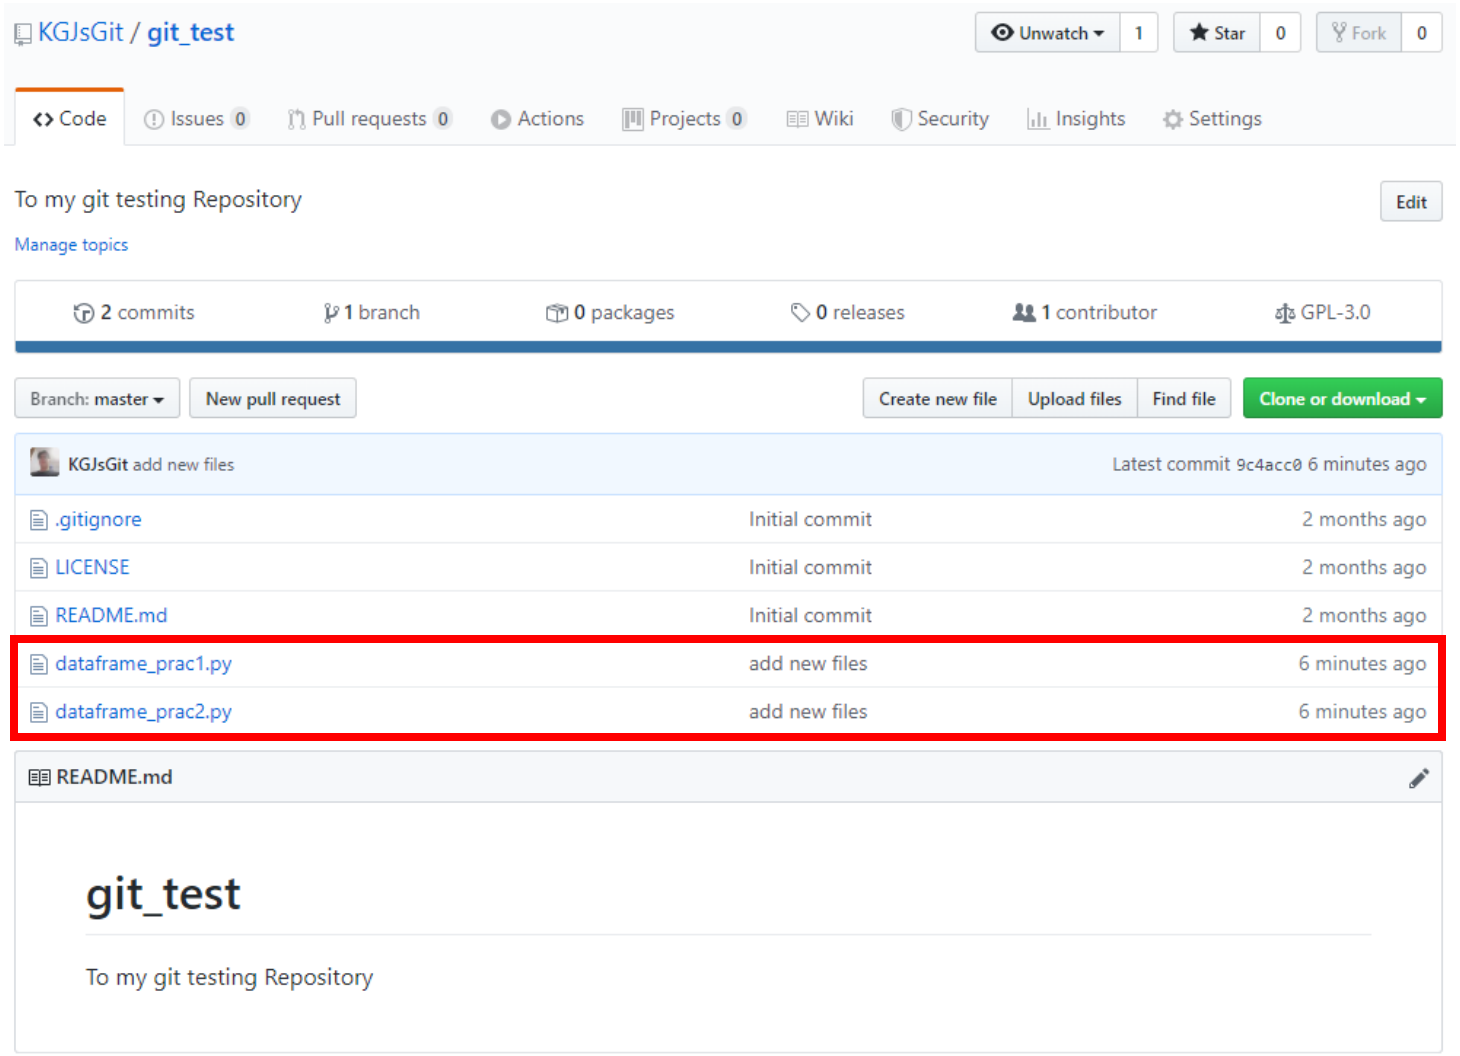
"git push remote origin master"

Git training



"git push remote origin master"

Git training



Additional Git keyword

- git clone
: remote repository의 모든 데이터를 복사. push시 원격저장소 자동 지정

- git rm 'file name'
: 깃의 파일을 삭제. working directory에서도 삭제됩니다. commit필요.

- git push -u origin master
: push의 -u 옵션은 remote repositor로부터 업데이트 받은 후 push하겠다는 의미

- git commit --amend -m 'comment'
: 최근 실수한 commit을 덮어 쓸 수 있음. 다만 되돌린 commit을 다시 되돌릴 수는 없음.

- git reset HEAD 'file name'
: 실수로 staging area에 올린 파일을 unstaged로 바꿔 줌

- git reset hard 'commit num'
: 해당 commit으로 git을 되돌리고 그 이후 모든 이력을 삭제합니다. hard대신 다양한 옵션 사용 가능

Congratulations
